

The world's largest hydrogen pipeline network delivers...

The world's most reliable hydrogen supply.

How does Air Products, the global leader in hydrogen supply, make the best hydrogen supply systems on the Gulf Coast even better? We connect them.

Air Products operates the world's largest hydrogen plant and pipeline network system. Always a value-added plus for hydrogen customers in terms of ensuring product reliability, if an event disrupts operations on one side of the Gulf Coast, hydrogen can keep flowing from the other, giving our refinery and petrochemical customers the reliable, uninterrupted industrial gas product supply they need. Air Products officially dedicated its Gulf Coast Pipeline in 2012. The 600-mile pipeline span stretches from the Houston Ship Channel in Texas to New Orleans, Louisiana, and supplies customers with over 1.4 billion feet of hydrogen per day from 22 hydrogen production facilities.
