Air Products

Want to make the ramp-up to hafnium- and zirconium-based precursors—and what follows along your development roadmap—fast and worry free? Then add an element of experience and expertise into your advanced DRAM and PRAM processes. Namely, Air Products. With over 35 years of global semiconductor experience, there is scarcely a ramp-up obstacle we can't help you overcome. We're already developing the precursors and delivery systems that will help make your next generation devices successful. To learn more and download our latest podcast, just visit www.airproducts.com/Highk2. See for yourself how our experience and expertise bring an added element of success.
