

## Add some to your next project.

*Kelly Boyer, Zay Risinger and Larry Thomas are part of the Performance Materials team helping create a competitive advantage everywhere from adhesives, paints and coatings to automotives, electronics and construction.*

© 2005 Air Products and Chemicals, Inc.

Imagine a paint so safe and odor-free that you can paint your dining room in the morning for a dinner party that evening. Or a concrete coating that cures and primes in 2 days, not 28. Or a grease-resistant French fry bag that doesn't contain fluorochemicals. All of these products are now a reality, with help from Air Products.

As the world's only global gas and chemicals company, we offer more than 40 years' experience in materials science and surface chemistry. This gives us unique

insights into helping you create products that are better than the competition – and better for the environment.

There's a single point of contact for all this knowledge. Just call our Performance Materials expert at 800-345-3148 (US), +31 30 285 7100 (Europe) or email [info@airproducts.com](mailto:info@airproducts.com). And gain a real advantage on your next project.
