

## Finally. Your concrete coatings can breathe.

Technical expert Willie Raymond helped create Anquamine-based primer and self-leveling systems that offer revolutionary solutions for green concrete applications.

The end of blistering and delamination of your concrete coatings is here. Anquamine® 701 epoxy curing agent lets you create unique microporous systems that are breathable and water permeable. Your coatings will have excellent adhesion, while allowing water vapor to escape at a rate 100 times greater

than the usual cycloaliphatic systems. They'll also be zero-VOC and have a long pot life and rapid drying time. So call 800-345-3148 or visit our web site to learn more about Anquamine 701 curing agent or order a free sample.
