

What's the secret to our affordable new NMP-free resins? Ever had an interpenetrating hair day?

Ernie Galgoci, Charlie Hegedus and Fritz Walker used our patented interpenetrating network technology to create new affordable, high-performing NMP-free Hybridur resins.

Tangles ruin a hairdo. But they make an ideal hybrid resin. Our Hybridur® 870 waterborne resin entangles acrylic and urethane polymers in an interpenetrating network that combines the affordability of an acrylic with the abrasion and chemical resistance of a PUD. When hardness

is a priority, choose Hybridur 878 resin. Either way you get maximum NMP-free formulating versatility that's highly cost-effective. For free samples, test data and formulations, call 800-345-3148 or visit us online.
