

We changed cryogenic freezing. Let us change your freezing performance, too.

Engineers Steve Baron, Ian Palmer, Geoff Fitsall and Mark Williams applied their combined understanding of freezing technologies to design this innovative freezer. And we provide expert process optimization to help you get the most from your Freshline Z system.

Introducing Freshline™ Z tunnel freezers. A new type of cryogenic refrigeration system that can greatly increase capacity and ease of operation while controlling nitrogen usage and cost.

Our engineers combined the power of cryogenics, the efficiency of impingement technology and the safety of indirect refrigeration. It's a high performance solution that's easy to operate and that

improves product quality. It limits dehydration, and ice crystals are smaller for better texture and appearance.

Call 800-654-4567 and ask for code 102, or visit our web site for a case study and data sheet. If you're looking for higher freezing performance, you're getting warmer.
