

Microfoam-free forever. Woohoo!

Finally, the end of microfoam. Working on a molecular level, Surfynol MD20 defoamer keeps waterborne coatings, inks and adhesives microfoam-free from formulation through final application. The result is improved product performance and smooth, defect-free finishes. A 100% active, solvent-free liquid, it requires no cutting or mixing. It also contains no hydrophobic silica or silicone. For performance data and a test sample, go online or call 800-345-3148 or 610-481-6799. And find out how good microfoam-free can feel.
