

Our new multifunctional surfactants keep you ahead of the environmental curve.

Our new high performance, environmentally friendly surfactants, based on Gemini technology, were conceived by the team of Caroline Slone (not shown), Ingrid Meier, and Kevin Lassila. Their surfactant application knowledge nurtured the new products from idea through commercialization, helping customers improve their formulations.

We know how meeting environmental requirements can challenge your business. Our chemists, always working to add to our family of more than 50 additives, realized they could help you on a whole new level. They created new surfactants that meet the specs of today, and prepare you for tomorrow, too. For example, EnviroGem™ AD01 is a solvent-free, 100% active liquid replacement for Surfynol® 104 solvent cuts, which allows you to consolidate

your raw materials. EnviroGem AE01 low-foam surfactant is readily biodegradable. And Surfynol 2502 surfactant combines foam control properties with exceptional wetting. Call 1-800-345-3147 or visit our Web site to learn more about these new products and for free information about Gemini technology.
