

We're all over it.

Our Lo-K team has the tools as well as the talent. Proprietary state-of-the-art liquid and gas precursors, equipment and packaging configurations – everything to cover your entire Lo-K roadmap.

Gases. Chemicals. Process integration. System management. Equipment. From top to bottom, lab to fab, our team's got it covered. Dr. Jean Vincent and Dr. Mark O'Neill are principal research chemists. Larry Allen-Siegfried works hand-in-hand with OEMs so integration of tools and precursors is seamless. Tracey Lawson and the Schumacher team share their knowledge of Lo-K precursors – MesoELK™ and SiF₄ and DOW CORNING® Z3MS™, Z4MS™, Z2DM™ and ZTOMCATS™ precursors.

Then there's an army of GASGUARD® and CHEMGUARD® safety sentinels. This multi-disciplined approach not only cuts fat out of processes, it increases your speed to ramp-up. It's all wrapped up in one smart, efficient package. Call +610-706-4730 or go to our Web site for Lo-K solutions. We don't just solve problems. We overwhelm them.
