

Inventory Management ←

Air Products' goal is to provide our customers with tools and information to make it easier and more convenient to do business with us. Our Inventory Management application allows you to view and exchange information regarding product inventory and delivery.

What is Inventory Management?

Inventory Management is a powerful online resource developed to help you understand your product usage and easily exchange critical information. Our Inventory Management application contains useful demand planning tools that enable you to manage your inventory to help avoid supply interruptions and improve forecasting and delivery efficiencies.

How can it help me?

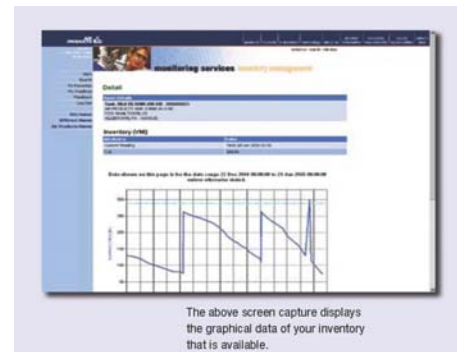

The Inventory Management application enables you to enter readings, maintain holiday and weekend production schedules and enter temporary delivery window restrictions. In addition, you can download a graphical, detailed view of your product usage. This data can be used to assist in production planning, identify usage trends or optimize your processes.

Features:

- Enter current readings
- Update production schedules
- Identify usage trends
- View current delivery window
- Modify temporary delivery window restrictions
- Download historical data

Benefits:

- Improved forecasting
- More accurate product usage analysis
- Increased delivery efficiency
- Consolidated view of information for all ship-to locations

Other Online Services:

- E-Billing
- E-Payment
- B2B Connections (e.g. EDI, EDIFACT, etc.)
