

## VAE technology from Air Products Polymers

Airflex® emulsion technology eliminates the need to use solvents in architectural coatings.

Air Products Polymers' Vinyl Acetate-Ethylene (VAE) technology is the answer to ever-tightening environmental restrictions on VOC levels in coatings. The technology's broad formulating latitude is ideal for low-odor flat, satin and semigloss paints in interior and exterior applications. As the world leader in VAE binder technology, we are committed to creating new products to meet your future coatings needs. So for your next coatings challenge, talk to one of our technical experts at 800-345-3148 or check out our Web site.

**High  
performance**

**Low odor**

*Wilfried Huster and his team continue to develop products to meet the growing demand for paint binder technologies that let you combine low VOC, low odor and high performance.*
