

A wood glue emulsion that's stronger,  
more stable and from someone who  
doesn't have you in a squeeze.

*Dr. Frank Petrocelli led an international team to develop a wood glue emulsion with both extended shelf life and performance for the North American market. According to Frank, "It is the breakthrough our customers were looking for."*

Competition in the high-end wood glue market is tough enough. But even tougher when essential components don't always deliver all the performance and stability attributes you need. Now you have a better option. Long the preferred choice of wood glue formulators in Europe, our high-performance cross-linking PVA wood glue emulsion is now available in North America exclusively for compounders.

Your choice, Vinac® DPN217 base emulsion or ready-to-use Vinac DPN890 wood glue. Both carry a premium U.S. Type II and European D3

bond rating, plus have outstanding pre-catalyzed storage stability unsurpassed by any other emulsion available.

More than a supplier, we are a resource. Let Air Products Polymers technical experts help you develop a more successful bond. To learn more and request free samples, call 1-800-345-3148 or 610-481-6799, or visit our Web site.
