

Angelica Llerena

.NET/Angular JS Developer

Why did you decide to join Air Products?

Air Products offered me the opportunity to grow both personally and professionally as a participant in the Career Development Program and is also giving me the opportunity to explore diverse areas of IT.

Why do you love working at Air Products? What is it that keeps you working at Air Products?

The best thing about Air Products is its people and diversity. I also like that I have access to many opportunities for development.

Please describe your career with Air Products to date.

I started at Air Products the summer of 2016 as an intern. I became a part of the Infrastructure team and helped the company to further integrate Indura, a South American company acquired by Air Products. At the end of my internship, I was offered a full-time position as a participant in the Career Development Program. I came back to Air Products in January, 2017, into my first (and current) rotation as a .NET/Angular JS Developer.

How does what you do contribute to sustainability?

The improvements we are making to our existing/new online experience is generating productivity benefits for our customers via greater ease of use. In turn, these improvements are helping Air Products to grow and improve its profitability.

What is the most intriguing/satisfying thing you've been involved in since you've been at Air Products?

The most satisfying thing I have been involved since I joined Air Products is being a part of the Microsoft Enablement Team as a developer. I am learning new technologies that are helping me to grow technically, and the chance to work closely with my colleagues is helping me to better understand the culture of Air Products and the working environment within IT.

What career advice would you give to those just starting out in their careers?

It won't be easy, that I can promise you. But always remember that if others made it as far as the stars, you can make it, too!
