

The Mooreland, Oklahoma air separation plant

An Air Products truck leaves a mobile staging area after loading nitrogen into mobile storage devices placed near an oilfield site. We have a fleet of such mobile devices, in both “queen” (16,500 gal) and “king” (24,000 gal) sizes.

“Our customers rely on us to keep them running. We are committed to meeting the high-volume needs of the oilfield industry, including deliveries 24/7, 365 days a year.”

Eduardo Garcia
Mooreland Site Manager

Supplying liquid nitrogen to Oklahoma, Kansas, and Texas shale and tight sands plays

A new addition to our global network of gas production facilities, the Mooreland air separation plant serves the oilfield industry in Oklahoma, Kansas, and Texas. The facility, dedicated in November 2012, strengthens Air Products’ existing leadership position in supplying the region’s oilfield customers. Air Products has additional Oklahoma operations in Pryor that produce liquid nitrogen, oxygen, and argon for oilfield and other markets, including food, chemicals, metal processing, electronics, and medical applications. The Mooreland plant employs 8 people in Woodward County.

Committed to flawless logistics and customer service

Our employees at Mooreland pride themselves on making a difference to customers by exceeding their expectations for service. They understand the unique needs of the oilfield industry for timely and reliable supply of liquid nitrogen. The local team works closely with dedicated customer service and logistics personnel at our headquarters in Allentown, Pennsylvania. The entire team is available 24 hours a day, 365 days a year.

The Mooreland facility is strategically located to deliver liquid nitrogen to shale and tight sands plays in the Texas/Oklahoma/Kansas area.

Serving our local communities

As part of a socially responsible corporation, our Mooreland facility is committed to being a good neighbor and employer. We are proud to be a new member of the Woodward Industrial Foundation and look forward to becoming more closely involved in the local community in which we work and live.

Our emphasis on safety

Air Products designs and operates our gas facilities worldwide to the highest safety standards. We're also a safety leader in our industry and stand among the top performers of the American Chemistry Council's Responsible Care® program. Our Mooreland employees attend monthly safety training, and our drivers conduct multiple safety inspections on each and every trip. We're also available 24/7 to respond to emergencies.

The Mooreland facility produces liquid nitrogen for delivery to customer yards and field sites. Focused on serving the oilfield industry, the plant site holds off-road trucks with sleeper cabs for tougher delivery locations. Plus customers can pick up product 24/7.

To optimize our product delivery network and lower customer costs, Mooreland delivers nitrogen to permanent staging areas close to field locations.

About Air Products

In addition to our operations in Oklahoma, Air Products serves customers in virtually every industry in more than 50 countries around the globe. We have over 20,000 employees who work each day to build lasting relationships with our customers and communities based on understanding needs, integrity in the way we do business, and passion for a job well done.
